

Specification Document

- **Project Name:** Kitchen Story
- **Developer Details:** Sarah yasmeeen
- **Project Description:**

Kitchen Story is an e-commerce portal that lets people shop basic food items on their website. The website needs to have the following features:

- A search form in the home page to allow entry of the food items to be purchased by the customer.
- Based on item details entered, it will show available food items with price.
- Once a person selects an item to purchase, they will be redirected to the list of available items. In the cart section, they are shown the complete breakout of the order and details of the payment to be made in the payment gateway. When payment is done, they are shown a confirmation page with details of the order.
- Admin login page where admin can change password after login if he wants to
- A master list of food items available for purchase
- A functionality to add or remove food items

This website is implemented using JavaScript and bootstrap then pushed to GitHub repository to track the enhancement of the application. The next sections describe about each step of the application.

- **Source Code:**

To implement the mentioned application, we have created seven html pages and corresponding JavaScript pages, after that the pages are linked with JS code. The following steps are used to create a bootstrap code in VS and then link it with JS.

- Open Visual Studio Code and create a new file to type the code in.
- Right click on the File menu of the code editor -> Select *New File*.
- Enter the below code resolving the warning and errors due to compatibility-related issues.
- Right click on the File menu of the code editor -> Select *Save as* -> Enter the filename (dashboard.html) -> Click *Save*.

In this project, we have 7 bootstrap files namely:

1. Dashboard.html
2. Contactus.html
3. Additems.html
4. Adminpage.html
5. Changepassword.html
6. Payment.html

7. Additem_admin.html

Also, we have linked 5 JavaScript code to link with the bootstrap.

Source Code:

1. Dashboard.html:

```

```

5. Additem.js

```

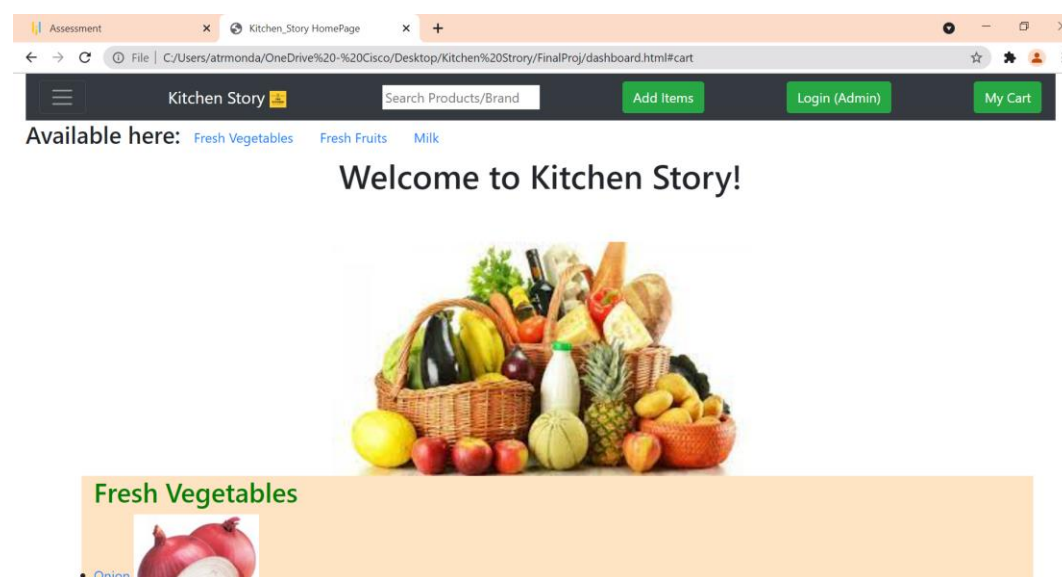

function gotopage(){
    window.location = "adminpage.html";
}

```

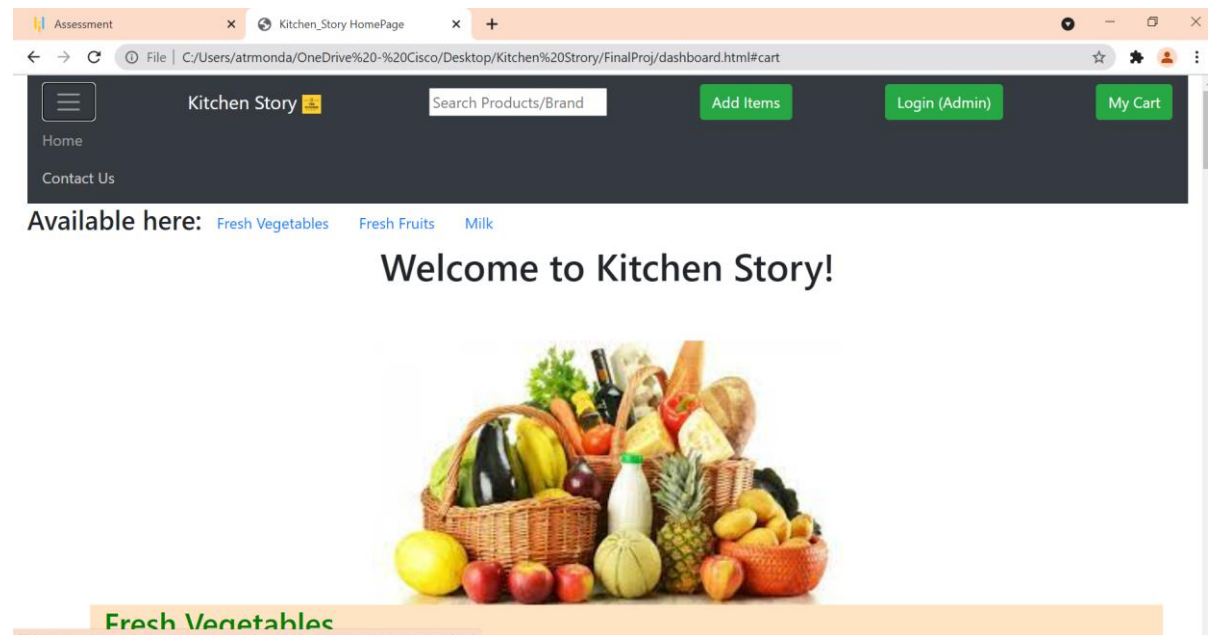

• Stepwise Output Screenshot

Step 1.a: Dashboard.html:

This is the welcome page of the website. From here, we have a navbar to navigate to home or contact us page. Also, we have the logo, search product/brand option, and some buttons to navigate to other pages. Firstly, if we choose Home from nav bar, it will stay in the same page.

Step 1.b: If we click on the contact us from nav-bar, it will redirect to contact us page as shown below:

Step 2a: Contact Us: In the contact us page, we have the contact details of the company with a query form below.

A screenshot of the 'Contact Us' page on the Kitchen Story website. The browser's address bar shows 'C:/Users/atrmonda/OneDrive%20-%20Cisco/Desktop/Kitchen%20Story/FinalProj/contactus.html'. The page has a dark header with a hamburger menu icon and the 'Kitchen Story' logo. The main content area is titled 'Contact Us' and includes the following text: 'WhatsApp us : 9876543210', 'Call Us : 1800 000 0000', '8:00 AM to 8:00 PM, 365 days', and 'Should you encounter any bugs, glitches, lack of functionality, delayed deliveries, billing errors or other problems on the beta website, please email us on kitchenstory@gmail.com'. There are social media icons for Facebook, Twitter, and Google+ on the right. Below this text is a query form with the instruction 'Please submit your queries by filling out this form. We will get in touch of you soon.' The form contains four input fields: 'First Name:' (placeholder 'First name'), 'Middle Name:' (placeholder 'Middle name'), 'Last Name:' (placeholder 'Last name'), and 'Email Address:' (placeholder 'name@example.com'). At the bottom of the form is a 'Contact No.' field with the placeholder 'Enter your Contact No.'.

Step 2.b: In the query form, we have the submit and cancel button and the other fields such as first name, last name, phone no. etc. There are some mandatory fields which needs to be filled to submit the form. If the user clicks on cancel, it will redirect to the home page. The screenshot is shown below:

Assessment x Contact Us x +

File | C:/Users/atmonda/OneDrive%20-%20Cisco/Desktop/Kitchen%20Story/FinalProj/contactus.html

Please submit your queries by filling out this form. We will get in touch of you soon.

First Name: First name Middle Name: Middle name Last Name: Last name

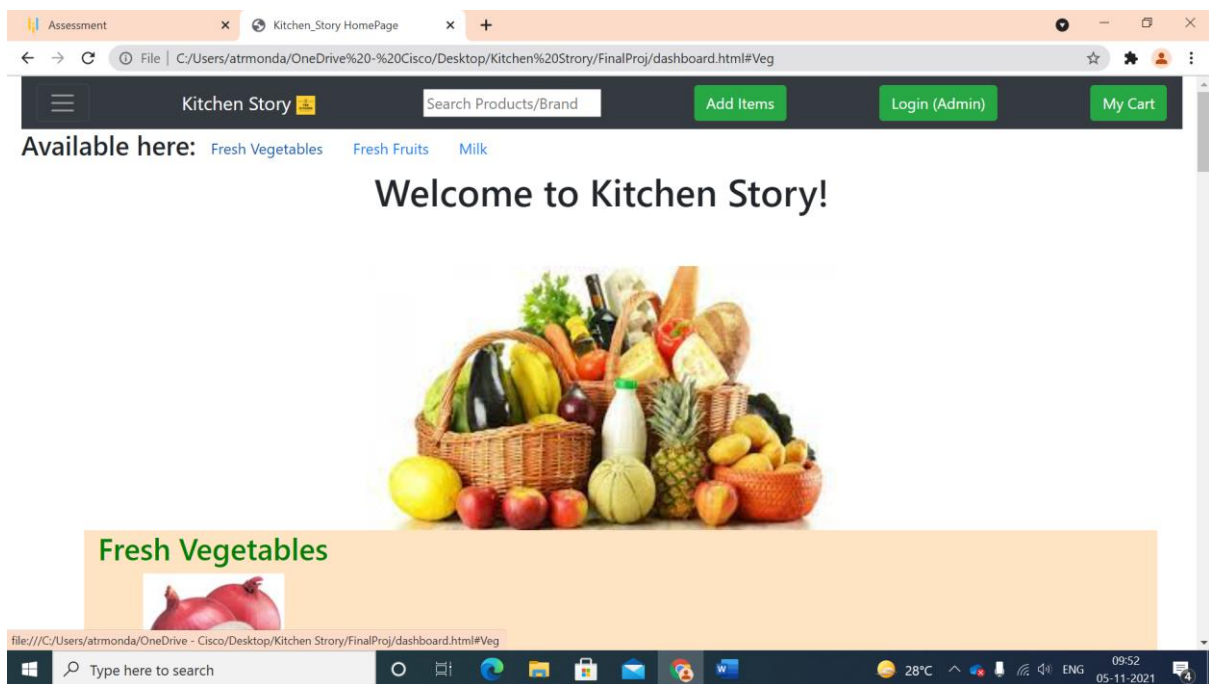

Email Address:  Please fill out this field. name@example.com

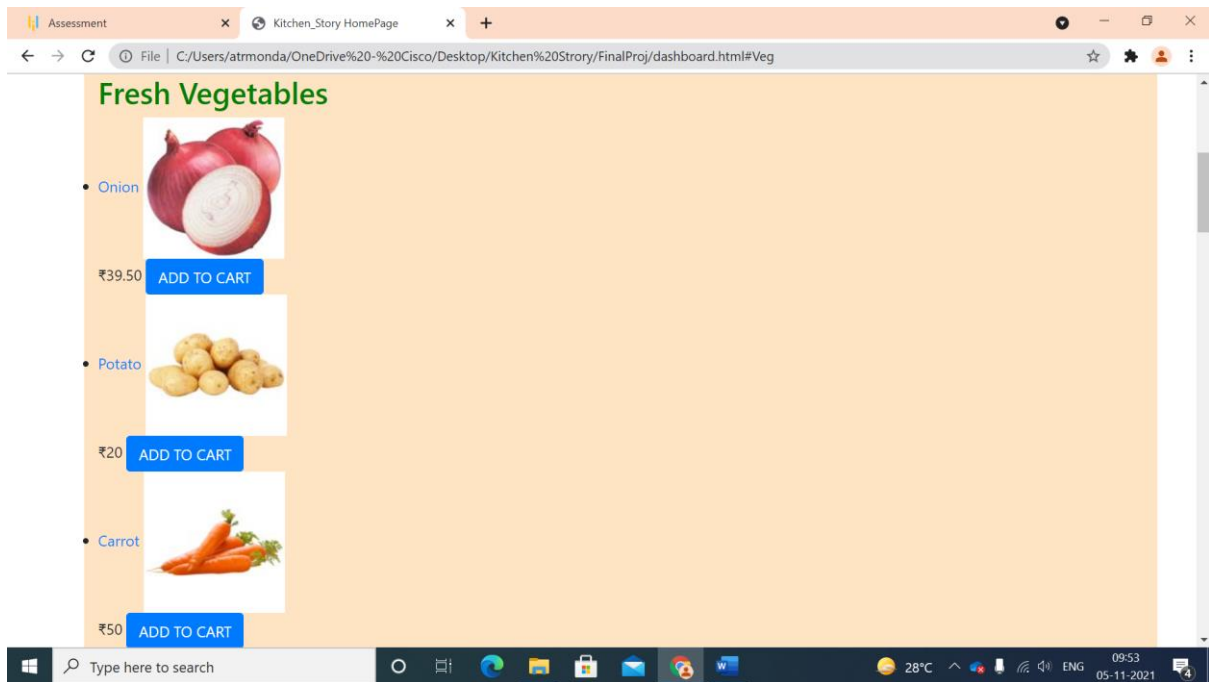

Contact No. Enter your Contact No.

Enter your query:

Cancel Submit

Step 3: There is an “available here” nav bar in the home page which redirects to list of fresh vegetables, fresh fruit and milk accordingly when each one is click. For e.g.: if user clicks on fresh vegetable, then it will show the fresh veg section, shown below:

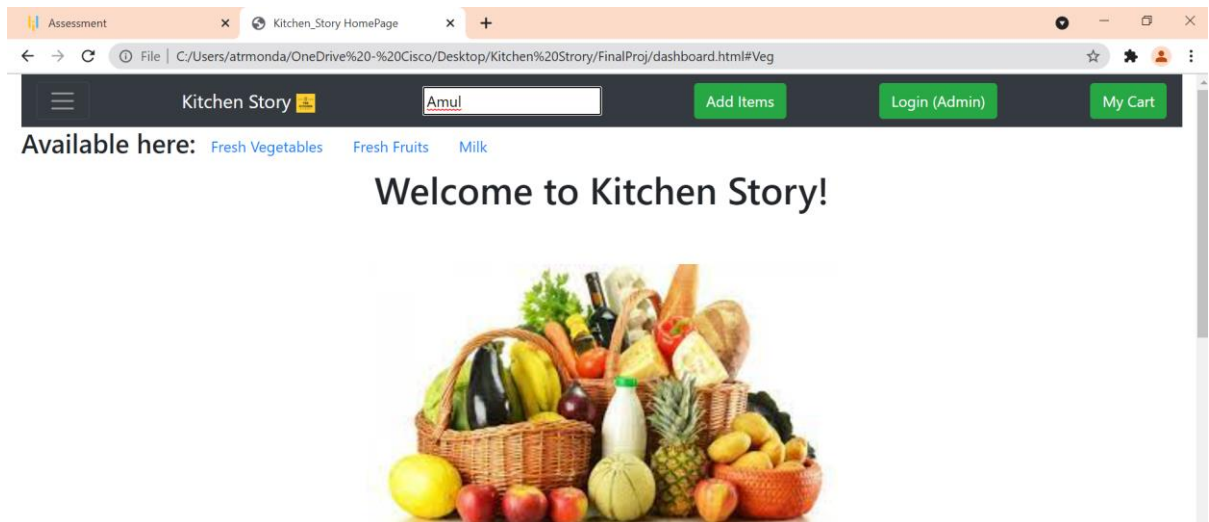

Similarly for fruit and milk will work.

Step 4:

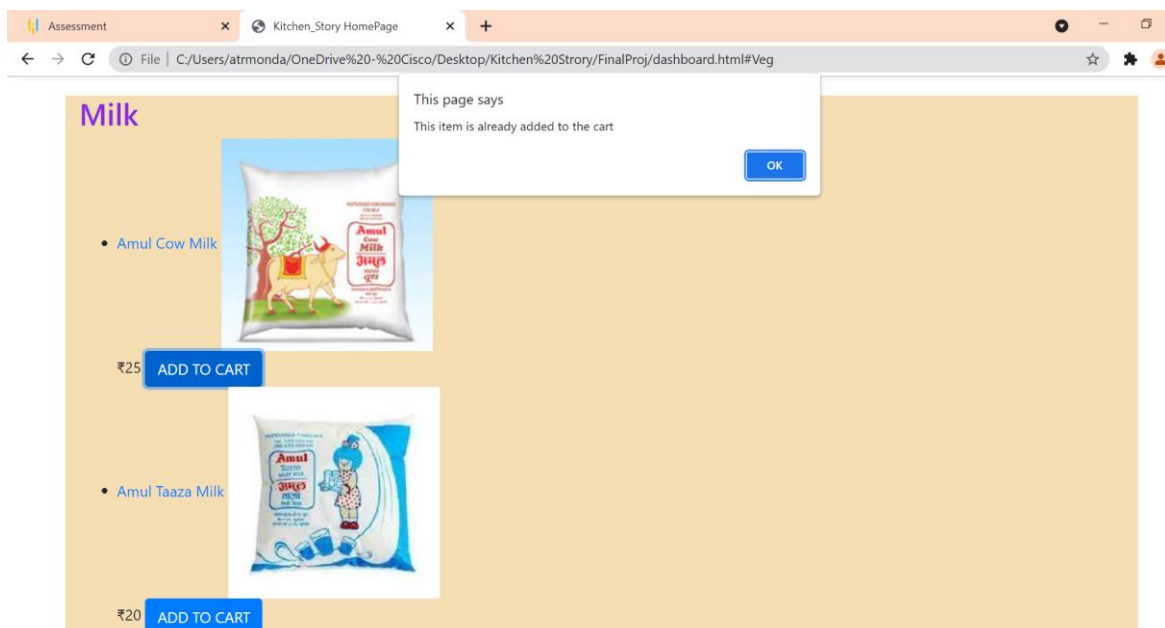

There is a search bar in the home page to search for any available items or brands. For e.g.: in the milk section, we have Amul, metro and mother dairy milk. If user type Amul in search bar, it will show the 2 types of Amul milk available in the website with price, quantity and option to add to cart.

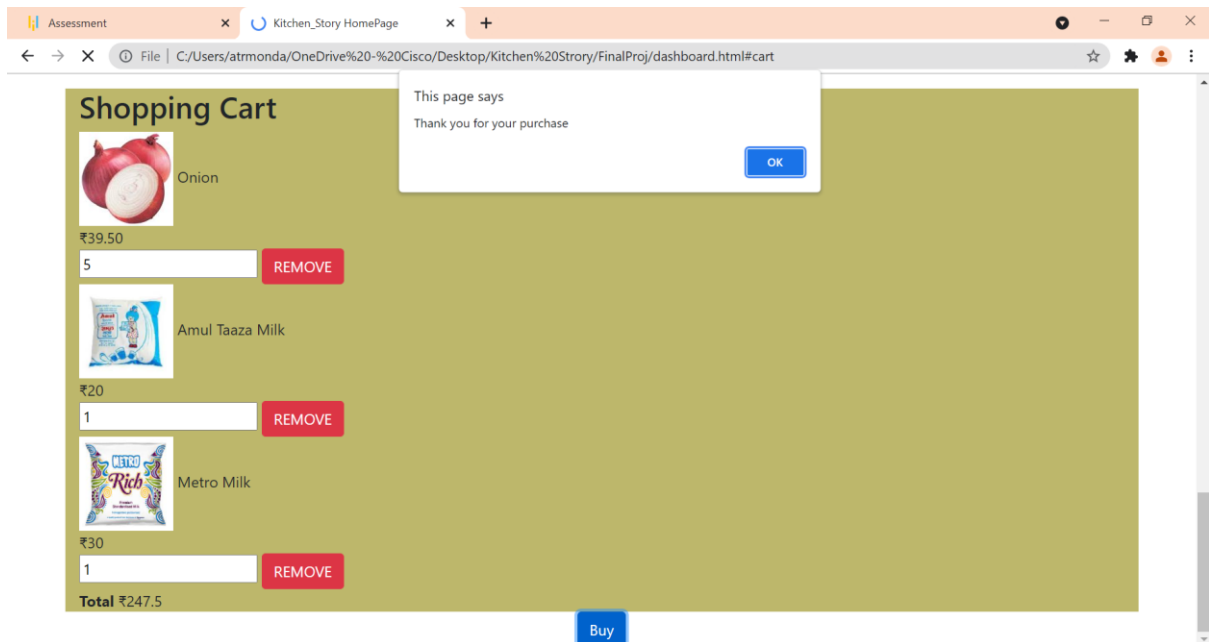

Step 5:

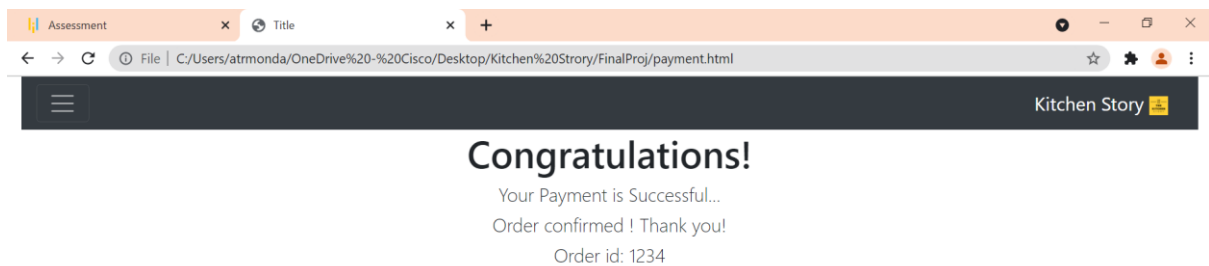

If we select add to cart, then it will be added to cart.

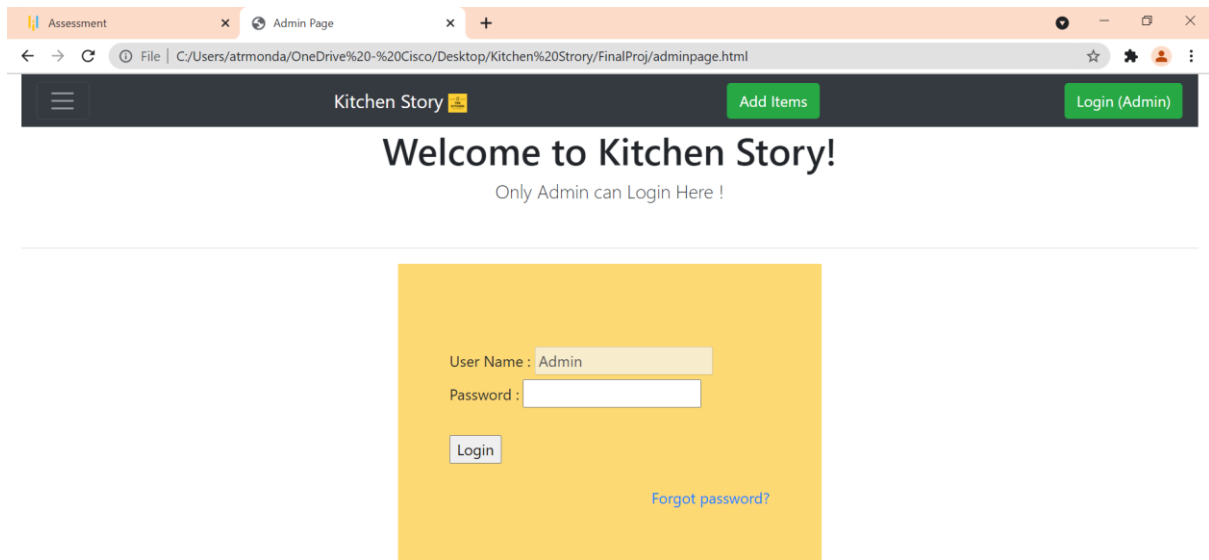

Step 6: User can edit the quantity required or remove from cart section by clicking on the My Cart button from the top navbar of the home page. In the shopping cart section, also a link to buy and item total is shown.

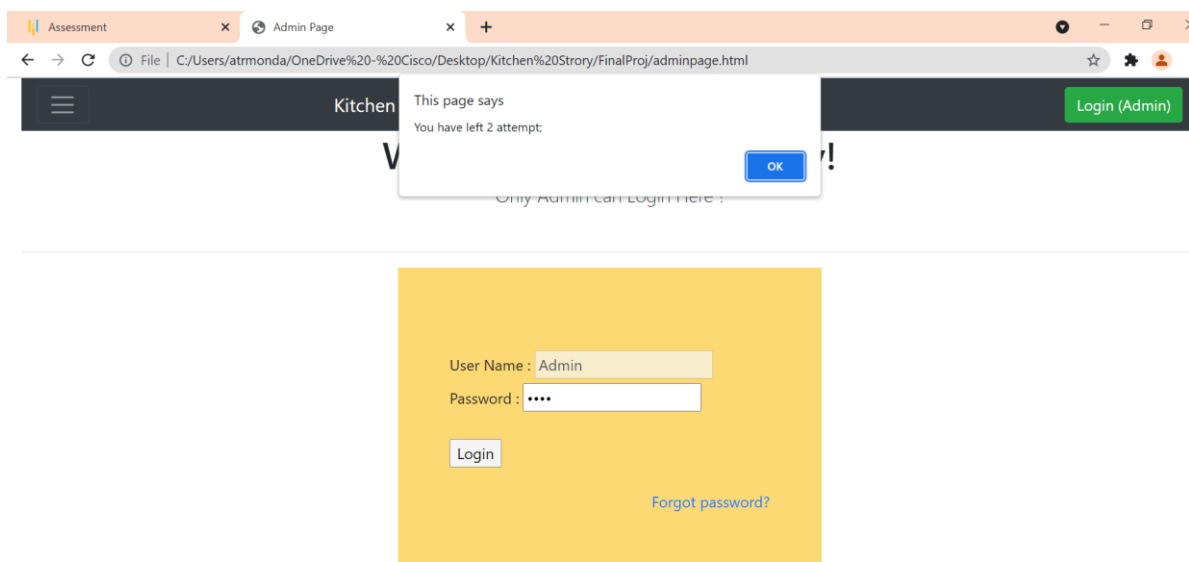

Step 7: (Payment.html) Then after clicking on buy, it will redirect to the payment page, as shown below:

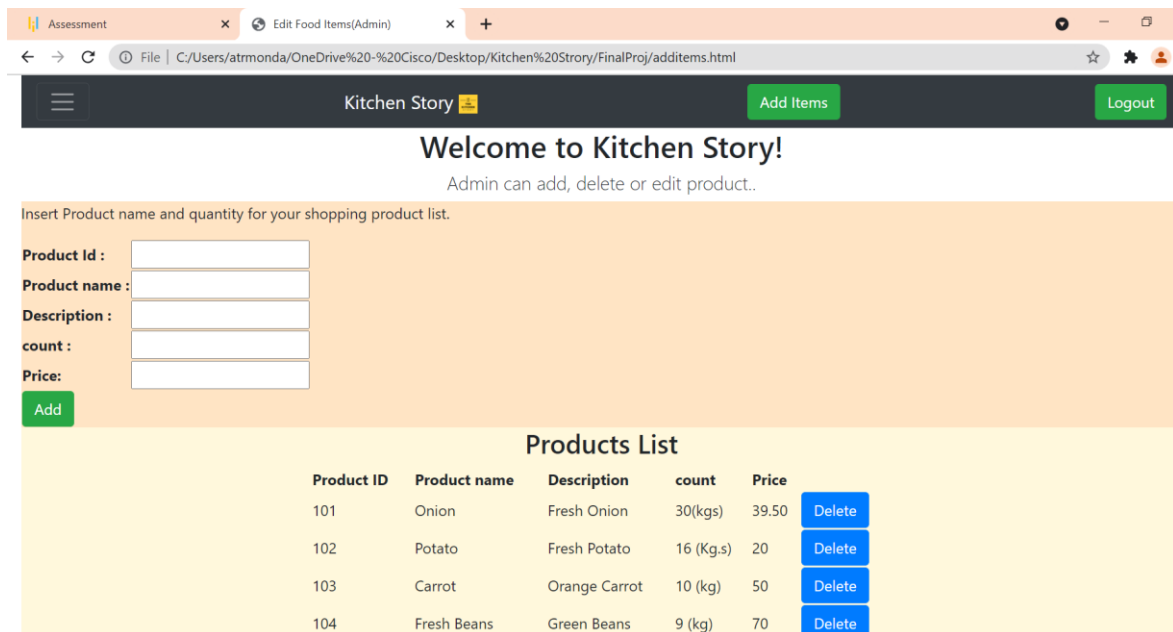

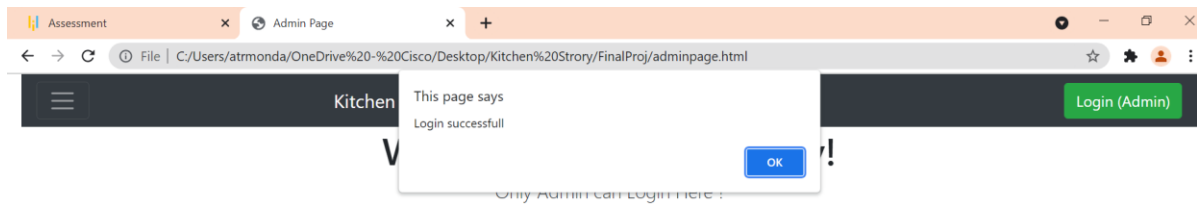

Step 8: There is an option to login for the admins. From Home Page if admin click login(admin) button from the navbar, then it will redirect to the login page.

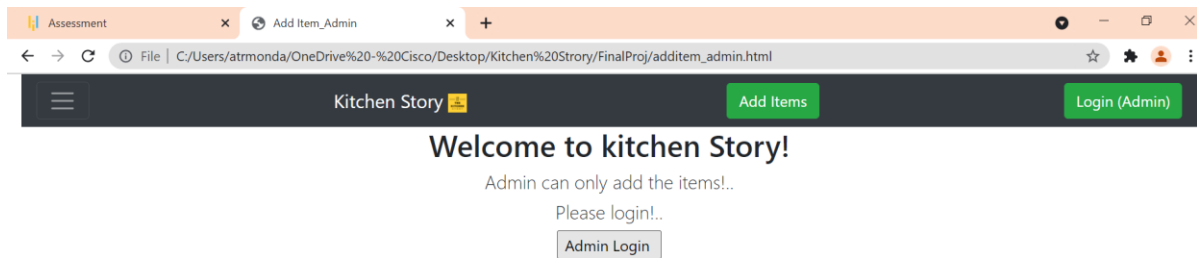

Step 9a: The Username is Admin which is not editable, and password is “12345”, if the password is entered wrong it will show an alert, as shown below.

Step 9.b: After login with the correct password “12345”, it will show the admin page where the list of all products is shown with the functionality to add/delete items.

Step 9.c: From the home page, if the user clicks on ADD ITEM button it will show the following page:

Here, if user clicks the admin login button from here, it will redirect to the admin login page (i.e. only admins can Add/delete items).

- **Link to GitHub repository:**

<https://github.com/Atreyee28/KitchenStory>

Procedure:

- Open your command prompt and navigate to the folder where you have created your files.
 - **cd <folder name>**
- Initialize your repository using the following command:
 - **git init**
- Add all the files to your git repository using the following command:
 - **git add .**
- Commit the changes using the following command:
 - **git commit . -m "Changes have been committed."**
- Push the files to the folder you initially created using the following command:
 - **git push -u origin master**

- **Conclusion:**

All the business operations mentioned here are working correctly and outputs screenshots are attached.
